The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 00/38722 (WO '722) in view of Curatolo et al (US 6,548,555).

WO '722 teaches combinations of an HMG Co A reductase inhibitor and CETP inhibitor (abstract). The elected CETP inhibitor is specified ("C-12" on page 18). The elected torvastatin is disclosed (Table 2 page 21). Tablets are specified (page 26 line 30).

Curatolo et al teach enhancing the bioavailability of basic drugs by admixing the drug with polymers such as cellulose acetate trimellitate (abstract), cited as a claimed acidic polymer (see specification, page 130 line 31). Amorphous drugs are specified (column 4 lines 51-52). Adsorption of a surfactant such as Tween onto the surface of such a drug to increase the rate of dissolution is disclosed (column 10 lines 34-56).

It would have been obvious to admix the CETP inhibitor of WO '22 with a polymer such as cellulose acetate trimellitate for the beneficial effect of enhancing the bioavailability of the active in view of Curatolo et al. It would have been further obvious to absorb a surfactant onto the surface of an amorphous form of the inhibitor to achieve the beneficial effect of increased dissolution. As to the claimed properties, they must be possessed by the obvious composition because it is the same as that claimed. As to the claimed substrate surface area, it is argued that an adsorbed surfactant constitutes

such a substrate. Further, it is argued that Tween, a liquid surfactant, will possess a surface area in excess of that claimed.

No claims allowed.
